Check item HHCCCI3: Cycle the roster and ask questions on SEX, AGE, DOB, ETHNICITY, RACE, and NOWAF of all un-deleted household members. At end goto HHCCCI6.

SEX

HHC.110 **FR: ASK IF NOT APPARENT. IF DK OR REFUSED ENTER YOUR BEST GUESS**
>SEX< {Are/Is} {you/name} male or female?
(1) Male (2) Female

B. AGE

AGE must be calculated in order for the interview to proceed. CAPI can calculate age four different ways depending on what information is available from the respondent.

AGE1: Age in years calculated from complete responses to AGEDOB_1 and AGEDOB_2 (see HHC.120).

AGE2: Age in years calculated from complete responses to AGEDOB_3, AGEDOB_4, and AGEDOB_5 (see HHC.120).

These two are compared. If they are equal, AGE is set, and interview proceeds to National Origin. If they are different, the Respondent is asked to verify date of birth and change if necessary (see HHC.124 and HHC.128). If complete information is given, AGE2 is recalculated and AGE is set at AGE2, and interview proceeds to National Origin.

AGE2 and AGE3 are calculated when birth year is given, but the birth month (AGEDOB_3) is missing (it is possible for the subject to be one of two ages in the current year because whether or not the birthday for the year has passed is unknown). AGE3 is calculated by subtracting the birth year from the current year. AGE4 calculated by subtracting the birth year from the current year minus one. The respondent is asked to choose which one is correct.

If the respondent is unable to choose one, the respondent is asked for a best guess (see HHC.150 below).

If they provide a range, CAPI will calculate an age (see HHC.160) from this information

If the Respondent refuses or doesn't know, CAPI will prompt respondent to indicate whether or not the person is older or younger than 18 years of age (see HHC.152, HHC.154, HHC.156).

HHC.120 What is {your/name} age?

>AGEDOB_1< Age: _____ Number
>AGEDOB_2< _____ Time Period
(1) Day(s)
(2) Week(s)
(3) Month(s)
(4) Year(s)

And what is your date of birth? Please give month, day, and year for the date of birth.

(2) February (7) July (12) December
(3) March (8) August
(4) April (9) September (97) Refused
(5) May (10) October (99) Don't know

Date of Birth:

>AGEDOB_3< MONTH: _____
>AGEDOB_4< DAY: _____
>AGEDOB_5< YEAR: _____

Check Item: If AGEDOB_1 and/or AGEDOB_2 eq <D,R> set AGE1 eq <D> goto AGE2; Else goto AGE1.

Check item AGECAL1: *AGE1 takes information entered in AGEDOB_1 and AGEDOB_2 (from HHC.120 above) and calculates an age.

Check item AGECAL2 *AGE2 takes the date-of-birth information entered in AGEDOB_3, AGEDOB_4, AGEDOB_5 (from HHC.120 above) and calculates an age. That age is stored in AGE2.

If not enough DOB information was given to calculate an age, AD@will be assigned to AGE2, and CAPI will employ several strategies to calculate the age. Which strategy section will be used depends on which part of DOB (month, day year) is missing and how much more information the Respondant can provide (see HHC.130-HHC.165).

Check item AGECK: AGECK compares the two ages calculated in AGE1 and AGE2. If they are different, goto HHC.124; else goto HHC.170.

HHC.124 There is a difference between the age the computer calculated from {your/name 's}
>DOBVER< date-of-birth and the age that you gave me. I recorded {your/name 's} date-of-birth as {BMM in words/BDD/AGEDOB @5}. Is that {your/name 's} correct date-of-birth?

| | (5) May | (10) October | (99) Don ' t know |

>DOB_BMON<	MONTH: _____
>DOB_BDAY<	DAY: _____
>DOB_BYEA<	YEAR: _____

Check Item: When CAPI has the birth year, but is missing birth month , it will calculate 2 possible ages AGE3 (the current year minus the birth year) and AGE4 (the current year minus 1 minus the birth year). If the birth year is the current year, CAPI will assign 0 to AGE3.
